**ABSTRACT:**

The freezer (1) has compartments and/or drawers (2,4) for the insertion of deep-frozen

goods and remotely accessible data media, each associated with or able to be associated with an item and that stores data for the item. The freezer has at least one antenna and/or reader (14) that detects the data on the data medium and its storage position and indicates and/or outputs it in optical and/or acoustic form. The data media can be produced with the items or attached manually by the user.
